

## Case 66FP pancreatic cancer

**Notice:**

This is a case where the homeopath has not yet prescribed. We would like to review the basics through your classification of diseases, repertorization analysis, and first prescription. Please give us your comments on the homeopath's disease classification chart (8) and the proposed first prescription (9).

Date of submission: 15th/Nov/2022

**Before submitting the case, be sure to obtain client's consent. Tick the box of the consent you get from your client.**

### 1) Chief Complaints

**Pancreatic cancer** (pancreatic head) Stage II B

Had surgery in November (duodenum, gallbladder, and bile ducts were completely removed. 1/2 of the pancreas was resected. Partial resection of stomach. One of 23 lymph nodes resected had metastasis.). Pathological examination results showed that **the cancer is aggressive** and tends to penetrate nerves, lymph and veins, so **she will have anticancer drug treatment.**

She is in the hospital (to be discharged at the end of November).

### 1) Detailed observation of the complaints

2022

|     |  |
|-----|--|
| Mar | 3rd <u>vaccination for covid.</u>  |
| Apr | Abdominal pain, jaundice. Stage 2 pancreatic cancer. Tumor marker CA19-9: 1030. Tumor size: <u>3 cm.</u><br>Treatment: Stenting of bile duct.            |
| Jun | 1st course of anticancer drugs. After that, CA19-9 : 1030->500. Then taking <u>baking soda and citric acid</u> for self-care (from late June to October) |
| Jul | 2nd course of anticancer drugs. CA19-9: 500->170   |
| Aug | 3rd course of anticancer drugs. CA19-9: 170->67 <b>Tumor size: 3cm -&gt; 2cm</b>   |
| Sep | 4th course of anticancer drugs. CEAT therapy (microwave therapy)   |
| Oct | <u>Interstitial pneumonia due to side effects of anticancer drugs.</u> Surgery postponed.  |
| Nov | Surgery. <u>Anaphylactic shock from intravenous antibiotic infusion.</u><br>To be discharged from hospital at the end of November.                       |

### 1)-B Etiology related to the chief complaint

**Covid vaccination (3 times)** and **strong stress from work** might be the etiology.

### 1)-C Medical History for chief complaint

A) **Bile duct stenting, anticancer drugs, CEAT (microwave), surgery.**

### 2) Symptoms other than the chief complaint

A) **Constipation** (Mxv) (Combsa)

B) **Severe stiff shoulders and problems in the legs.**

### 2)-A Detailed observation of the complaints (other than the chief complaint)

A) **Tendency to constipate since childhood.** <Stress at work: bowel movements once a week during work days and every 2-3 days during vacation.

Age 21: **Constipation worsened after starting to work.** She sometimes did not have a bowel movement for 10 days.

She deliberately chugged a glass of cold milk, upsetting her stomach and defecating. (no milk intolerance).

Age 21-24: Took 4 pills/d of over-the-counter laxatives daily.

Age 24: **Vomiting when constipated.**

Concomitant symptoms: **Psoriasis** when constipation is prolonged for about a week (thighs, shins, side of abdomen, buttocks), also psoriasis appears when having a cold.

Sypsh / Ave  
Phos  
Mxv  
Mae

B) Wobbling in ankles (both legs but left leg has stronger symptoms). The left leg has weak sense since she had a strained back (it is difficult to feel when touched). She couldn't stand on her toes for a month after having strained back (she can do it now). Muscle weakness in the left leg after this surgery rapidly progressed.

*Carotid S*

### 3) Mental and physical characteristics

Tall, fair complexion, lacking power in voice. She is slender, but has a strong frame. High body temperature. *(Phos.) Carotid (Ruler)*

Serious, stubborn, hate to lose, kind, gentle. *(Scl)*

Likes to travel. Likes horses (riding horses is her hobby). Likes sweets.

Irritated when she gets scolded or restricted in what she wants to do. *Stage Nurse*

Does things at her own pace, likes to challenge.

Worry about forgetting to turn off the fire in the kitchen or locking the door. *- Nurse. Clean Accy.*

Susceptible to the effects of the bad news.

Dislike loud voices and noises (which startle her so much that she thought her heart would burst.)

Anamnesis of ulcerative colitis (age 31 to 40)

Occasional cystitis (age 21 to 40)

### 4) Timeline

| age    | Incidents  |
|--------|--|
| Birth: | <u>C-section, Twins, 2900g</u> <i>(Surg?)</i>  |
| 3      | <u>Intestinal hernia (surgery)</u> , chickenpox, mumps<br><i>Tub?</i>  |
| 5      | She was scared that her father was hanging her brother from the 3rd floor window and scolding him.<br>Molestation (She was stripped naked. She was scared) <i>Stage - Stage Accy</i> |
| 9      | <u>Parents divorced</u> . She thought the divorce was good because <u>her father cheated on her mother, and he was a vicious drinker</u> . <i>(Surg) / (Stage)</i>                   |
| 10     | <u>Molestation (The molester put his hand inside her underwear. She was scared)</u> <i>(Stage) Accy</i>  |
| 14     | First menstruation.  |
| 15     | <u>The lower part of her body was touched by her cousin. She was scared.</u> <i>(Stage) / Accy</i>   |
| 18     | Failed university entrance exam.   |
| 21     | <u>Employed, Constipation worsening, Laxatives</u> <i>(Nurse)</i><br><u>Occasional cystitis</u> (until about age 40) (antibiotics) <i>(Stage?)</i>                                   |
| 25     | <u>Married, gave birth to the first child, maternity blues.</u> <i>(Surg)</i><br><u>Constipation (Chinese medicine), defecation with tea or cold milk</u> (no milk intolerance).     |

|    |   |
|----|---|
| 29 | Divorced <i>Staph</i>   |
| 30 | Pregnant with second child, remarried and gave birth <u>against her family opposition.</u> <i>Staph</i>   |
| 31 | Bloody stool, ulcerative colitis. <i>Staph</i> <i>men</i> <i>reynold</i> <i>amp/Tub</i>   |
| 35 | Birth of the third child. Eldest daughter (child with the ex-husband) and new husband do not get along well, and he <u>started to beat her.</u> <i>Staph</i><br>Stressful days at work, <u>problems between husband and the eldest daughter, and parenting.</u> <i>Staph</i>  |
| 40 | <u>Divorced, living with 3 children.</u> <i>Staph</i> <i>unknown?</i><br><u>Influenza vaccine every year.</u><br><u>Ulcerative colitis symptoms subsided.</u> <i>Amib</i> <i>Suppressed?</i>  |
| 44 | Had a strained back. From then to now, her back does not bend much. The Sensation in the left leg is weak. <i>Staph</i>   |
| 48 | A disagreement with her eldest daughter, and the daughter began to live alone. <i>Staph / 2yr</i><br>July: 1st Covid vaccination<br>Aug: 2nd Covid vaccination } <i>Staph / Aug</i>   |
| 49 | Mar: <u>3rd Covid vaccination</u><br>Apr: <u>Diagnosed with pancreatic cancer.</u> Abdominal pain and jaundice.<br>Jun: 4 courses of anticancer drugs (Jun, July, Aug, Sep) Hair loss and urticaria<br>Aug: Menstruation stopped.<br>Sep: CEAT (Microwave) 8 times.<br>Nov: Surgery, anaphylactic shock from intravenous antibiotic infusion.<br>Postoperative diarrhea is bothersome, liver and white blood cell counts are high. <i>Pathway</i> <i>trunc</i> <i>Colon Cancer</i> <i>Staph</i> |

## 5) Family History

|                      | Age or (Age of Death) | Alive or dead | Past History / Cause of Death   |
|----------------------|-----------------------|---------------|---|
| Mother               | 69                    | Alive         | Ovarian cysts, varicose veins, duodenal ulcers, and <u>colorectal cancer.</u>     |
| Father               | 70                    | Alive         | <u>Sinusitis, violent</u> , indifferent to children. <i>Kaloid</i> <i>→ Staph</i> |
| Maternal grandmother | (97)                  | dead          | <u>Tuberculosis</u> , senility <i>Tub</i> <i>→ pleurisy?</i>                      |
| Maternal grandfather | (97)                  | dead          | <u>Tuberculosis, prostate cancer</u> , senility <i>Staph?</i> <i>Canc</i>         |
| Paternal grandmother | unknown               | Alive         | None  |
| Paternal grandfather | unknown               | dead          | <u>Stomach cancer</u> , dementia after cerebral hemorrhage <i>Staph?</i>          |
| Twin brother         | 49                    | Alive         | Many small injuries as a child.   |

### 8) The most important questions from the homoeopath

1. I am considering Hydr. and Con. as the main remedies from the results of the repertorization. I differentiate two remedies as below.

Hydr.: liver and gastrointestinal tract rather than pancreas, **painful cancer**.

Con.: cancer of the gland, progressive cancer, acute pancreatitis, pancreatic cancer.

Which is better for a painless pancreatic cancer like this client's?

*Carra  
Siga - Carra  
Canc*

*Carra  
Siph  
Canc*

tea  
II Carduus marianus

2. If Con. is more indicated in this case, 5 drops of 100 ml of Con.3c (10% concentration) in a spoonful of water and take 3/d and success only once a week. Is this the best way to start homeopathy treatment with?

3. If metastasis is found, should I just continue to approach the primary pancreatic cancer without prescribing remedies for the metastatic organs? **Yes**

Or is it necessary to approach the metastatic organ as well with mother tincture or some remedies? *if symptoms are clear*

4. She may undergo anti-cancer drug treatment. If the side effects during the anti-cancer treatment are severe, I should change the main remedy (the third) to Nux-v. and then return to the pancreatic cancer remedy after the side effects settled down. Is my understanding correct?
